

SYSTEMS ANALYSIS & DESIGN

Semester: II (Spring)
Stage: I
Number of Credits: 4 semester credits/6 quarter units

Aims and Objectives

- To give students the ability to work in the principal areas of Computer Applications;
- To develop an appreciation of how component tasks of Computing e.g. analysis, design and implementation can benefit from and contribute to an understanding of problem solutions in other disciplines;
- To ensure students have an adequate awareness of the problems of the business environment into which most computer-based applications have to fit;
- To provide students with the ability to select and apply appropriate techniques to particular development projects;
- Communicate effectively both orally and in writing;
